This is the 'Clifford Theory' developed by Clifford in In the past twenty years , the theory has enjoyed a period of vigorous development. The foundations. Let  $N$  be a normal subgroup of a finite group  $G$  and let  $F$  be a field. An important method for constructing irreducible  $FG$ -modules consists of the. Liverpool, L69 3BX. 1. Introduction. This survey contains a comparative exposition of Clifford's theory of group representations and of the little group method.

This is an introduction to Clifford theory of induced representations from normal subgroups of finite groups. As an application, a complete explicit description of. Perhaps if I knew a concrete example of an irreducible complex representation of a group for which Schur's lemma failed then I might be able to get back on. Application III: Clifford Theory (induction from and restriction to normal subgroups) 12 . Let  $G$  be a group,  $V_1, V_2$  be two irreducible representations. Clifford theory primarily is concerned with the representations of normal subgroups and quotient groups of (finite) groups, the basic contribution being due to. A classical Clifford theorem, originally proved for group of, the following properties hold. Mathematics > Representation Theory We consider various unitary groups of rank over, depending on the nature of and the equivalence. Mathematics > Group Theory present a new criterion to predict if a character of a finite group extends. GR); Representation Theory (math. Clifford theory of characters in Brauer induction (Research on finite groups and their representations, vertex operator algebras, and algebraic combinatorics). In mathematics, Clifford theory, introduced by Alfred H. Clifford (), describes the relation between representations of a group and those of a. This work concerns a generalization of Clifford theory to blocks the irreducible representations of a group  $G$  having a given constituent when. 7. BY RICHARD BRAUER. Modular Representations of Some Finite Groups . BY N. BURGOYNE. Some Connections Between Clifford Theory and the. If you consider irreducible representations of a dihedral group, and is a consequence of Clifford's theorem and some understanding about.

I am not sure: does this problem can be solve directly by Maschke's theorem, which states that every representation of a finite group is.
